BLUEPRINT

Finance's blueprint
for smarter spend
governance

Mind the spend control gap

You have the foundations of spend control in place with SAP Concur. It allows you to set policies, define approval workflows and manage reimbursements with ease. But if your colleagues are still paying for expenses with personal or company cards, you've no visibility or control over the payments themselves – leaving gaps in your spend governance puzzle.

Policy leakage across teams and unpleasant month-end surprises

Audit and compliance risk from incomplete spend data

Delayed reimbursements and heavy manual effort

In a nutshell: your spend policy is disconnected from payments and it's driving up admin and noncompliance.

30 hours a month

Wasted by managers chasing receipts and approvals¹

Fix the spend control gap with Soldo

Pair Soldo cards with SAP Concur to eliminate payment blind spots. Here's how they integrate seamlessly – without any need for onboarding or system changes – to make your spend control work all the way through.

What is Soldo?

Soldo is a spend management solution that combines proactive controls with an intelligent, policy-driven payment system. As a SAP Concur partner, Soldo integrates directly with the platform to ensure every payment is controlled and aligned with policy. Avoid complex card setup processes and gain full visibility over expenses by replacing personal and company cards with cards that guarantee compliance across your business.

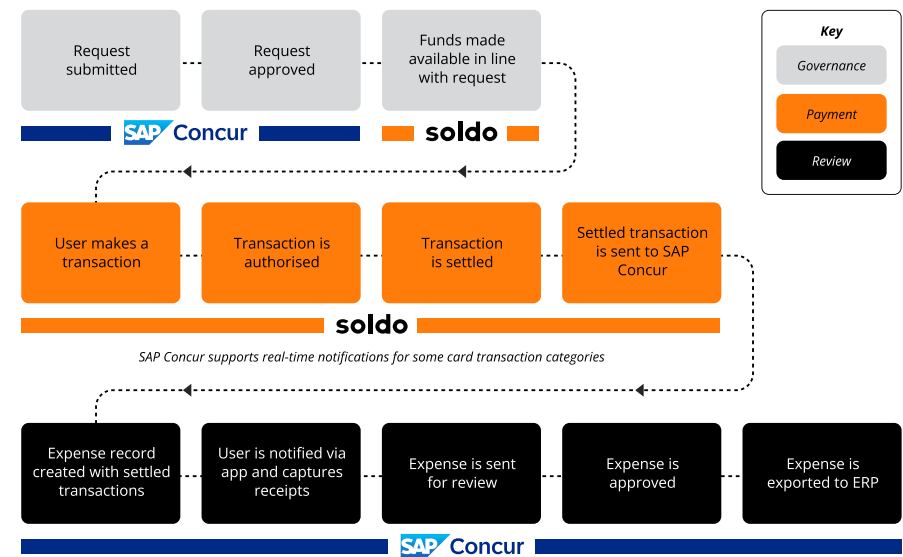

“We manage cards in Soldo and account for transactions in SAP Concur, meaning all our T&E is in one system. The integration has been a gamechanger for us.”

Tim Ward - Group Payroll Manager, Audley Travel

Connect policy and payments with Soldo

**STEP 1**

Set policies in SAP Concur

Set your spend rules and approval workflows in SAP Concur as usual. Once a request is approved, Soldo automatically creates and funds a card in line with your policy, so your colleagues can only spend within the limits you've defined.

- Govern spend upfront with clear rules and approvals
- Remove ambiguity among colleagues about what is and isn't allowed
- Create a consistent, organisation-wide approach to spend

**STEP 2**

Issue Soldo cards to control payments at source

Every Soldo card is instantly issued with all the correct coding, cost centre and context carried over directly from SAP Concur. Your rules are effectively built into the cards, so your policy is applied at the point of purchase, not after the fact when it's too late.

- Stop overspend with controls embedded in every Soldo card
- Instantly issue cards – no complex setup process required
- View and manage all cards directly from Soldo

**STEP 3**

Review spend in SAP Concur

Card transactions sync straight back into SAP Concur, giving you up-to-date visibility of spend across your business. You now have a single source of clean, coded spend data that is easily accessible for analysis and audit, and ready for export into your ERP system for accurate financial reporting and planning.

- Close out month-end faster
- Reduce admin and manual reconciliation effort
- Improve audit readiness and forecasting

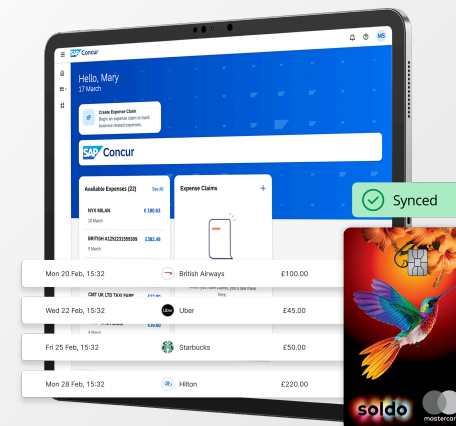

Get ahead on spend control

Shift from reactive to proactive spend management. Stop expecting colleagues to remember ever-changing expense policies and start using Soldo cards with the rules built in. Apply controls at the point of purchase, eliminate the manual admin that comes with expenses and deliver a smoother spend experience for everyone across your business.
